IMPLEMENTATION PLAN

Nirvan Earth Marketplace Settlement

Test mode · Live mode · Shopify + Webkul + Stripe Connect · UAE

1. What we are building

An automated settlement layer on top of the Client's existing Shopify checkout, Webkul Multi Vendor, and Stripe account (acct_1TxOZVK0wm8bsReE). Customer pays once at Shopify. Money lands on Nirvan Earth's Stripe platform balance. At month end we produce vendor statements; after approval from admin@nirvanearth.com, we create Stripe Transfers of approved net to each vendor's Custom connected account, targeted for the 10th of the following month. Bank payout from the connected account is a later Client-controlled step.

Shopify checkout and Webkul stay as they are. We do not use Webkul's Stripe checkout add-on. No live gateway, payout or Connect changes without written approval from admin@nirvanearth.com.

2. Locked calculation rules (approved)

Rule	Definition
Commission	20% of product selling value after product/customer discounts, excluding vendor VAT
VAT	VAT-registered: VAT shown separately, not in commission base. Non-VAT: no vendor VAT
Own products / hampers	Nirvan Earth fulfilled — not third-party vendor sales; no vendor settlement line
Shipping	Separate from 20% commission
Stripe / Connect fees	Borne by Nirvan Earth; shown separately on statement
Qualification	After fulfilment + return window expiry + no open return/refund/chargeback/dispute
Timing	Qualified amounts → Transfer on 10th of next month after tool approval + available balance
Future fees	Listing / campaign / featured: separate; not activated in this build
Approver	Anik Bilala · admin@nirvanearth.com

3. Technical architecture (summary)

- **Source of truth for money:** Stripe (charges on platform; Transfers to Custom connected accounts).
- **Source of truth for catalogue / vendors / fulfilment:** Shopify + Webkul.
- **Settlement app:** small Client-owned host (UI + DB) for month packs, statements, approvals, audit, Transfer calls, emails to admin@.
- **Charge type:** Separate Charges and Transfers (SCT). No on_behalf_of for the default path.
- **Connected accounts:** UAE Custom only; licensed businesses with trade licence; no unlicensed individuals.
- **Platform payouts:** already manual — leave as-is. Do not switch without written approval.

4. TEST MODE — what to do now

Commencement: **11 October 2026**. Target: ~10 working days. All work uses Stripe **test** keys only. Dummy vendors and test orders. No live Transfers.

4.1 Day-by-day plan

Days	Work
1–2	Validate Shopify orders + Webkul seller mapping; confirm test Stripe key works; create test Custom connected accounts; lock data model (order, line, vendor, commission, VAT, shipping, fees, status)
3–6	Build: ingest paid orders; apply rules; month pack; vendor statement; approval screen; email on initiate/approve/execute; audit log; Transfer API in test mode; handle failed/duplicate Transfer
7–8	Run full test matrix (section 4.3); fix defects; document results
9–10	Handover pack: docs, credentials map, hosting note, operating steps; Client written acceptance of test mode

4.2 Build checklist (test)

- Order ingest from Shopify (paid, line items, discounts, shipping, refunds).
- Vendor attribution via Webkul (seller id per line); flag Nirvan Earth own products / gift hampers.
- Commission engine per approved rules; VAT display logic; fee lines (Stripe) as Nirvan Earth cost.
- Status machine: pending fulfilment → in return window → qualified / blocked → approved → transferred / failed.
- Month pack generator (calendar month).
- Approval UI: only authorised emails; pending until approve; email admin@ on initiate, approve, execute.
- Stripe test: create Custom accounts; Transfer with amount and destination; link to source charge where applicable; log Transfer id.
- Idempotency: no double Transfer for same vendor-month line.
- Audit: who / when / action / amount / vendor / result.

4.3 Required test cases

#	Scenario	Expect
1	Single-vendor paid order	One statement line; 20% after discount; shipping separate
2	Mixed-vendor cart	Split lines per vendor; several Transfers from one charge possible
3	Nirvan Earth own product / gift hamper	No vendor commission or settlement line
4	VAT-registered vendor	VAT shown separate; not in commission base
5	Non-VAT vendor	No vendor VAT
6	Discount	Commission on post-discount product value
7	Refund / return before qualify	Amount blocked or adjusted; no Transfer until resolved
8	Chargeback / dispute open	Not qualified
9	Approve → Transfer success (test)	Email + audit + Transfer id stored
10	Transfer fail / retry	Status failed; no silent double pay; retry controlled
11	Duplicate approval attempt	Idempotent; second Transfer not created
12	Unqualified at cut-off	Rolls to later cycle

4.4 Test-mode hard rules

Do not in test mode

- Use live Stripe keys or live Transfers
- Change platform payout schedule, gateway, or Connect live settings
- Onboard real UAE vendors to live Custom accounts without Client approval
- Skip admin@ approval path in the tool design

5. LIVE MODE — when Client writes “go live”

Live activation is a **separate stage**. It needs written approval from admin@nirvanearth.com. Do not start until that email exists.

5.1 Pre-live checklist (Client + Erms)

Owner	Action
Client	Written approval: production deploy + live Transfers
Client	Stripe Dashboard: Connect platform profile approved (Settings → Connect → Platform profile)
Client	Confirm platform payouts remain manual (already set)
Client	Provide live restricted key or live access only after go-live email (minimum scopes)
Client	Approve production hosting (provider, owner = Nirvan Earth, recurring cost)
Erms	Deploy app to Client-owned host; hand over admin access + docs
Erms	Switch app config to live keys only after written approval
Both	Optional: human Stripe case reference if Client still wants it

5.2 Live vendor onboarding

- Only licensed UAE businesses with valid trade licence (Stripe Custom).
- Collect: legal name, trade licence, bank details for later payout, contact email.
- Create Custom connected account; complete Stripe verification; store mapping vendor ↔ acct_…
- Connected-account payouts: leave manual if Client wants funds to stay on Stripe until they release bank payout.
- No cross-border: platform and connected accounts both UAE.

5.3 First live month cycle

- Ingest live paid orders for the calendar month.
- Apply locked rules; block unqualified lines (return window, open disputes).
- Generate vendor statements; notify admin@.
- Client approves each line (or pack) in the tool.
- On/after the 10th of following month: create Transfers for approved qualified amounts only if balance available (UAE T+5).
- Email + audit on execute; store Transfer ids.
- Unapproved or unqualified → next cycle.
- Bank payout from vendor connected account: Client decision later (manual or schedule).

5.4 Live hard rules

Do not in live without written approval

- Change Shopify payment provider or Webkul payment add-on
- Toggle platform or connected-account payout schedules
- Transfer amounts that are not qualified and approved in the tool
- Use production keys in local/dev machines beyond agreed secure process

6. Hosting (test vs production)

Stage	Approach
Test	Dev/staging host under Erms or temporary Client project; test Stripe only; no real money
Production	Client-owned lightweight host (e.g. Railway / Render / Fly / Vercel + DB). Disclose provider + monthly cost; Client owns account; full admin at handover
Cost	Build fee excludes ongoing host fees. Client pays host directly after approval of arrangement

7. Core records to implement

- **Vendor:** id, name, VAT status, stripe_connected_account_id, active flag.
- **OrderLine:** shopify_order_id, line_id, vendor_id or own_product flag, gross, discount, net_product, vat, shipping_alloc, paid_at, fulfilled_at, return_window_end.
- **Adjustment:** refund / chargeback / dispute amounts linked to line or order.
- **SettlementLine:** month, vendor_id, commission_base, commission_20, fees_note, net_payable, status (blocked/qualified/approved/transferred/failed).
- **Approval:** actor email, timestamp, decision.
- **TransferLog:** stripe_transfer_id, amount, status, idempotency_key, raw response.

8. Handover deliverables

- Working settlement app (test accepted; live when approved).

- Documentation: workflow, calculations, config, hosting owner/cost, operating steps, approval steps, error handling, maintenance.
- Test results for the matrix in §4.3.
- Credential/access map; reduce Erms access after handover as Client directs.
- Six months in-scope defect support from production deployment (Clause 11).

9. Current status (11 Oct 2026)

Item	Status
Agreement + advance	Done
Calculation rules	Approved
Shopify collaborator	Done
Webkul admin via Apps	Done (confirm seller payment screens in daily work)
Stripe test keys	Received
Formal commencement	11 October 2026
Live keys / live Transfers	Blocked until written go-live

Internal working document for Erms delivery team. Client-facing commitments remain those in NE-SA-2026-09-V3 and written approvals from admin@nirvanearth.com.
